

Wireshark Security Cheat-Sheet (Single Page)

1. IP Traffic Baselines

- ip.src (Outbound): Normal 20–40%. Risk: >70%.
- ip.dst (Inbound): Normal 60–80%. Risk: >95%.

2. Key Port Filters

- HTTPS: tcp.port == 443 → Normal 500–10k packets.
- QUIC: udp.port == 443 → Normal 1k–30k (video).
- DNS: udp.port == 53 → Normal 50–300. Risk: >500.
- HTTP: tcp.port == 80 → Normal <200. Risk: >1000.
- NTP: udp.port == 123 → Normal 0–10. Risk: >100.

3. DNS Indicators

- dns.flags.response == 0 → Normal 20–200.
- dns.qry.name.len > 50 → Normal CDN behavior. Risk if >100 randomized.
- dns.type == 16 (TXT) → Should be 0. Risk: Exfiltration/tunneling.
- NXDOMAIN storms (rcode 3) → Risk if high-frequency.

4. Attack Detection Filters

- Port Scan: tcp.flags.syn==1 and tcp.flags.ack==0 → Normal <100. Risk >200.
- Reset Flood: tcp.flags.reset==1 → Normal <200. Risk >500.
- MITM: arp.duplicate-address-detected → Should be 0.
- ARP Storm: arp → Normal <200. Risk >300.
- ICMP: icmp → Normal <20. Risk >100 (ping flood).

5. TCP Anomalies

- Retransmission: tcp.analysis.retransmission → Normal <100. Risk >500.
- Out-of-order: tcp.analysis.out_of_order → Normal <100. Risk >500.
- Zero Window: tcp.analysis.zero_window → Should be 0.

6. Dangerous Protocols

- Telnet: tcp.port == 23 → Should be 0.
- FTP: tcp.port == 21 → Should be 0.
- SMBv1: smb → Should be 0.
